Take-Home Assignment - Korporatio

Part 2 - Secure Business Wallet Management App

This assignment focuses on **transaction handling for the wallet system** and is provided as a **second-phase extension** to the initial project.

In this phase, users can initiate **money transfers** from one wallet to another. Transfers may be:

- **Internal transfers** (between wallets within the system)

- **External transfers** (from a wallet to an external destination identified by an address or key)

A new role, **Manager**, is introduced.

When a transfer amount exceeds a **predefined limit**, the transaction must go through an **approval process**. Managers are responsible for reviewing and approving or rejecting these transactions.
